Attachment to Advisory Action

In regards to the merits of Tsukasaki et al, the applicants continue to allege that Tsukasaki does not teach that the respective storage devices do not carry out the function of "storing information which adapts the mounting member for optimal use during mounting of electrical components".

The examiner most respectfully disagrees for the following reasons.

First, the examiner's position is that the storage devices 502, 503 (in Fig. 6) of Tsukasaki do carry out the above function, which stores information not only where components must be placed, but also stores information of the head arrangement, i.e. mounting members, which allow optimal use of the positions of the head arrangement during mounting of the electrical components or parts. All of this information that is stored contributes to the mounting and positioning of the electrical components or parts. This is clearly evident from the flowchart of Tsukasaki (in Fig. 6).

Second, the claimed "respective storage device" does not structurally distinguish over the storage devices 502, 503 of Tsukasaki. The claimed invention is directed to an apparatus and while features of an apparatus may be recited either structurally or functionally, claims directed to an apparatus must be distinguished from the prior art in terms of structure rather than function. *In re Schreiber*, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429, 1431-32 (Fed. Cir. 1997). Moreover, a claim containing a "recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus" if the prior art apparatus teaches all the structural limitations of the claim. *Ex parte Masham*, 2 USPQ2d 1647 (Bd. Pat. App. & Inter. 1987).
